

European Integration: Course Evaluation (anonymous)

Dear students, I hope that you are all well, and that you have managed to cope with the various challenges posed by this pandemic-ridden winter semester. As you may have noticed, I have put a lot of effort into organizing the European Integration lecture and tutorials in online mode, and I am eager to learn how you evaluate this course with respect to both contents and organization. I would therefore be very grateful if you could fill in the following questionnaire. Of course, participation is voluntary, and answers will be strictly anonymous.

- Generally a very good structure of the presentation slides. Especially the slide sets 12,13 and 14 were very good organized and structured which helped a lot to learn and cluster the topics! Appreciate that.
- I really appreciate the effort for this course given the circumstances. Uploading videos weekly is a good compromise.
- very motivating, explanations to the point

- Really interesting content. Highly relevant and great link to current events
- I believe a couple of tutorials (Problem set 5 and 6 in particular) are a bit difficult with respect to the respective theory. I would have spent more time on those topics also in the theory (explaining the math behind), to then do the exercises.
- Large heterogeneity in the problem sets, some were just right, some harder. For some topics it would have been nice to have more (short) calculation exercises with transfer to practice for the exam.

Some of the papers were too long to read them carefully.

I liked the part with the microfoundations a lot. However, lectures 11-13 were a little bit confusing.

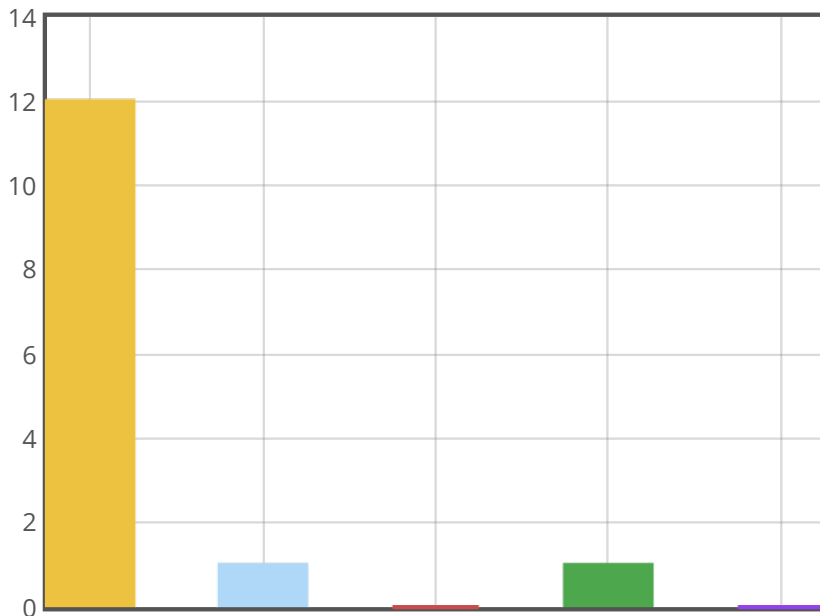

- Managed to present new/deeper insights about a topic most students probably know a lot about

- Given the circumstances, I think it was a good compromise. I don't know however if it could work for all the courses. I was interested in the topics, so I barely missed videos weekly; but it happened with other courses that I skipped classes because they were recorded. So this solution has both pros and cons
- Highly appreciated the videos being uploaded analogously to how lectures would have taken place. This is much better than not uploading anything for a while and then providing an overwhelming amount.

- Structure, presentations and tutorials, teaching style
- structured presentations, Q&A meetings and videos
- Interesting topics
 - Understandable explanations
 - Competent lecturer
 - Thanks for the great videos, the understandable solutions and the mock exam!
- Topics
 - Real cases
- the organization was very clear from the beginning
 - the quality of the videos
 - Q&A sessions
- the instructor was well-prepared and able to explain the topics in an understandable way for students.
- - organization and clear structure of the main framework, slides and tutorials
 - the topic ! diversified but detailed
 - the pace and continuity of the videos

- Some quantitative exercises
- I would have preferred to write the exam in presence.
 - The timing in the Mock exam was very though.
 - Some of the papers were too long.
- course content was to extensive and complicated. In comaprison with other modules I have to study much more (e.g. a lot of papers to read)
- - equations kind of hard to understand from scratch without some hints on maths (e.g. Chain rule, factoring out, quadratic equations,...)
 - no interaction possible
