12. What did you especially like about the lecture?

- Very interactive, very motivating.
- I appreciate the professor's teaching style, as he possesses deep knowledge of the complexities of economics.
- Enthusiastic professor. Nice that the topics get motivated all the time with real life content.

- Teaching, talking about how models work in reality
 - He is well prepared and not gets people bored
 - Quality of lecture and the detailed explanation of theory with good examples
 - Enthusiasm of Prof. Harms
 - I really liked that it helped me to actually understand why a trade surplus is not necessarily a good thing and vice versa.
 - -The way of delivering of the lecture.
 - most of the content.
 - For me as a political scientist it is especially important to understand the underlying aspects of economic changes that influences the political development.
 - Ausführliche Erklärungen
- Equations während der Vorlesung erarbeiten
- The professor Harms are teaching in a good and sometimes fun way. It is not boring at all.
 - I liked how the professor really dives deep in the contents, it becomes easier for us to catch up to the content, as sometimes the students might have forgotten or even not know that concept beforehand, other times, it just strengthens the concepts, if known already. So, I appreciated this style of teaching.
 - It was interactive and gave me a deeper understanding of how to analyse economics using real world phenomenon
 - Lecturer is knowledgeable and knows what he is teaching.
 - vivid !
 - New examples and relation to current policies
 - Insight about how to consider country balances was new and very interesting to understand.

13. What should be improved?

- I think I found everything well prepared and presented.
- I would like to have more more examples as i learn better with practicing, this is my thing so..
- -
- Ability to read and understand Macroeconomic theories in real life
- There is too much text on some lecture slides. It is sometimes hard to listen and read at the same time. It would be better to rather point out the basic concepts and add technical details in some comments "below" the slide or as a "comment".

Due to little feedback during lecture it is hard to understand, whether the speed is appropriate for the group. For me personally, it could be faster and I need less examples for things that seem easy to me (e.g. X-rates). It is more important to repeat harder concepts like NIIP and CA.

- More insight on the statistical aspects of the course
- Slides could be improved, and lecturer could slow down a bit. Some times it's too fast.
- Maybe you could provide a collection of terms and calculation heuristics to male the math a bit easier
- I believe this International Macroeconomics course is best suited for students with a strong interest and background in economics. Since I had never studied economics before, I found the course quite intensive and challenging. However, overall, it was a valuable experience, even though it was very difficult for me without any prior background.

- Sometimes it is to complicate scenarios in the exam than in tutorial for example which is a part of the lecture.
